| 4. Interpretation of CFP quantification results | | | | | |
|---|--|---|--|--|--|
| | | | | | |
| | | CO2 emission in use and maintenance stage is the largest as 84%. It is important | | | |
| | | to save energy during product usage. | | | |
| | | The use condition in this scenario can be different from the use condition of the user. | | | |
| | Interpretation of CFP quantification results | A choice of the use condition (print mode, print conditions and so on) can reduce the CO2 emission during product usage. | | | |
| 4.1 | | For example, 510kg-CO2e of the CO2 emissions (approximately 21%) can be reduced | | | |
| | | if 2-in-1 print is applied to 367,500sheets (50% of print volume). | | | |
| | | Primary data is used in the raw material consumption. Secondary data is used in the parts manufacturing process which might not be reflected our own circumstances because it is difficult to collect the data for thousands of the parts. Please understand this result as the rough estimate according to the reason mentioned above. | | | |
