Registration Information Carbon Footprint of Products (CFP)

1. Pro	duct information		
1.1	Registration number	CR-DG02-20013-A	1.7 Product photo
1.2	Registration name	Xerox PrimeLink B9125 Copier/Printer	
1.3	Model name / number	Xerox PrimeLink B9125 Copier/Printer	
1.4	Main specifications of product	Print speed (Mono): 125ppm (Letter) Maximum Paper size: 330mmx488mm Capable of print/copy/scan, duplex printing. Product Size: 2,339(W)x913(D)x1,477(H) (mm) Product weight: 392kg	
1.5	CFP quantification unit	Per unit product	
1.6	CFP release date	February 17th, 2020	

2. Con	npany Information	
2.1	Company name (in English)	FUJIFILM Business Innovation Corp.
2.2	Phone number (incl. area code)	+81-3-6271-5111

3.1 CFP quantification results 13,000 kg-CO2e	3. CFF	o quantification results, and	d description of CFP declration			
Raw material acquisition stage Production stage 18 kg-CO₂e Distribution stage Use & maintenance stage Distribution stage 10,000 kg-CO₂e Disposal & recycling stage 120 kg-CO₂e Value in CFP mark and description of additional info. Value in CFP mark 13,000kg Per unit product *Calculated by the standard Scenario for MFP (EP type). *Calculated on the basic configuration. *CO₂ emission in the distribution stage assumes the United States as the main sales area. *Electric power in the use and maintenance stage is evaluated with the public electric-power-consumption-rate in the United States. *In this scenario, the CO₂ emissions from copy papers are estimated 72,000 kg-CO₂e additional info. Description of additional info. Description of additional info. Disposal & recycling stage Use & maintenance stage Raw material acquisition stage 15% Production stage 0.2% Distribution stage Use & maintenance stage Use & maintenance stage		CFP quantification		kg-CO2e		
Stage 1,900 Ng-CO2e		Breakdown (by life cycle	e stage, by process, by flow, etc.)			
3.2 Distribution stage Use & maintenance stage 10,000 kg-CO2e Disposal & recycling stage 120 kg-CO2e Value in CFP mark and description of additional info. *Calculated by the standard Scenario for MFP (EP type). *Calculated on the basic configuration. *CO2 emission in the distribution stage assumes the United States as the main sales area. *Electric power in the use and maintenance stage is evaluated with the public electric-power-consumption-rate in the United States. *Print volume is assumed 9,370,000 sheets. *In this scenario, the CO2 emissions from copy papers are estimated 72,000 kg-CO2e at 4.0g per A4 paper. *The CO2 emission of printing paper is excluded from the use and maintenance stage. *Electric power in the use stage is evaluated based on TEC value which is measured in acordance with International ENERGY STAR Program version 3.0. Disposal & recycling stage 15% Production stage 0.2% Distribution stage 15% Distribution stage 4%		·	1,900	kg-CO₂e

3.4 Remarks	3.4	Remarks				

4. Inte	rpretation of CFP quantific	cation results
		CO2 emission in use and maintenance stage is the largest as 80%. It is important to save energy during product usage.
4.1		The use condition in this scenario can be different from the use condition of the user. A choice of the use condition (print mode, print conditions and so on) can reduce the CO2 emission during product usage. For example, 2,500kg-CO2e of the CO2 emissions (approximately 20%) can be reduced if 2-in-1 print is applied to 50% of the estimated total print volume. Primary data is used in the raw material consumption. Secondary data is used in the parts manufacturing process which might not be reflected our own circumstances because it is difficult to collect the data for thousands of the parts. Please understand this result as the rough estimate according to the reason mentioned above.
